

The code below is what you use in order to make your page link to another page without actually seeing the URL of the page:

```
<a class="link" href="http://www.ask.com/" target="_blank">Ask Jeeves</a>
```

Rules for using above example:

black text stays same

replace red text with URL of desired linked site

replace green text with words you want to see on page

Do not space or return anywhere in this code or it won't work.
